<i>Wind</i>	E 3 - 6 mph	E to NE 5 - 10 mph, G15	N 5 - 10 mph

Summary: Dry conditions are now forecast through the daytime on Friday with rain showers building in after Midnight Friday night. A sharp gradient in precipitation is forecast to set up along the PA/NY border heading into Saturday with the higher rainfall totals expected to hold in Pennsylvania. If that is the case, rain may only fall at a light to perhaps moderate intensity with the higher rainfall rates looking less likely in Spencer, NY. Rain should then gradually taper off Saturday night into early Sunday as the main precipitation shield shifts southward.

Forecast Confidence: Higher resolution weather models are depicting a sharp gradient in precipitation with some guidance suggesting even lower rainfall totals than currently forecast above. Still, there is quite a mix of solutions for Saturday; however, currently leaning towards the wetter model guidance.

Scheduled Updates:

- Friday, October 13
